Free Interpreter Services

- In the hospital, ask your child's nurse.
- From outside the hospital, call the toll-free Family Interpreting Line 1-866-583-1527. Tell the interpreter the name or extension you need.
- For Deaf and hard of hearing callers
206-987-2280 (TTY).

What is abdominal breathing?

Abdominal breathing is a way to breathe from your stomach area (abdomen) to fill your entire lungs with air. Your lungs are like balloons that should fill up and empty all the way.

Your body gets the most benefit when you breathe using your entire lungs. Many people who are under stress breathe in short and shallow breaths from the chest. This is not the best way to breathe because it only uses the upper parts of the lung. Breathing only from your chest can increase muscle tension.

What are the benefits of abdominal breathing?

Abdominal breathing allows your muscles to relax and lets more oxygen in to energize your body. You can practice abdominal breathing when you are tense, anxious, low on energy or need to calm your mind. A few deep breaths from your stomach area can make a difference. It is important that you breathe from your abdomen when you are under stress. This will help reduce tension and anxiety.

How do I breathe from my abdomen?

Lie down and put your hands on your stomach area. Breathe from your abdomen so that your hands go up when you breathe in and down when you breathe out. Focus on making your stomach go up and down at a regular rate. Make it smooth and easy. You can practice this anywhere.

Other breathing exercises:

- *Watch your breath.* This is called mindfulness. Sit or lie in a comfortable position with your eyes closed. Focus your attention on your breathing, and do not try to change it. Watch it go in and out. If it changes, keep being aware of it, almost like you are watching someone else. This is a way to relax and balance your body and mind. This method can also work to decrease pain.
- *Focus on breathing out.* Keep watching your breath, and do not try to change it. Think only of breathing out. When you push more air out, you will automatically take more air in. Breathe deeply and feel yourself relax.

Seattle Children's offers interpreter services for Deaf, hard of hearing or non-English speaking patients, family members and legal representatives free of charge. Seattle Children's will make this information available in alternate formats upon request. Call the Family Resource Center at 206-987-2201.

This handout has been reviewed by clinical staff at Seattle Children's. However, your child's needs are unique. Before you act or rely upon this information, please talk with your child's healthcare provider.
