

No radiation. No chemo. No cancer. Would you like to hear more?

Dr. Michael Jensen is a renowned pediatric cancer expert. He heads a research team that is testing a remarkable therapy that would treat cancer without the debilitating effects of chemotherapy or radiation.

It works like this: Healthy T-Cells are taken from the cancer patient and genetically reprogrammed to destroy cancer cells. When reprogrammed cells are returned to the body, the patient self-heals—with only mild side effects.

Cure.

At Seattle Children's Research Institute, medical miracles move from the laboratory to the hospital bedside, to relieve the suffering of so many children and their families. All thanks to generous contributors like you. Join Dr. Jensen's crusade to wipe out childhood cancer. Visit seattlechildrens.org/research.
