Seattle Children’s
Prenatal Diagnosis and Treatment Program

Leadership
Mark Lewin, MD, Medical Director
Professor of Pediatrics
Adjunct Associate Professor of Obstetrics-Gynecology

Edith Cheng, MD
Director of Prenatal Diagnosis Program; Maternal Fetal Medicine
Associate Professor of Obstetrics-Gynecology

Lani Wolfe, ARNP,
Clinic Manager

Most Frequently Treated Conditions
Abdominal wall defects (gastroschisis and omphalocele)
Brain malformations
Cardiac arrhythmias
Chromosomal conditions
Congenital heart diseases
Diaphragmatic hernias
Intestinal atresias
Lung lesions
Multiple anomalies occurring together
Neck masses
Renal/Urologic abnormalities
Spina bifida and other CNS anomalies

Integrated Prenatal Care and Family Support

Seattle Children’s Prenatal Diagnosis and Treatment Program brings together obstetric and pediatric specialty care for families when a pregnancy is complicated by fetal anomalies. The program bridges obstetric and pediatric care to improve outcomes and provide family guidance. We offer comprehensive care including advanced fetal diagnosis, genetic counseling and condition-specific prenatal counseling. Our perinatal-care coordination ensures condition-specific management of the pregnancy, delivery and care of the newborn.

Our multidisciplinary team is composed of an advanced-practice nurse, genetic counselors, fetal diagnostic imaging specialists, pediatric medical as well as surgical specialists, perinatologists and social workers. We collaborate closely with obstetric providers to ensure the best approach for each patient.

Common reasons for referral include abnormal prenatal screening or chromosome analysis, suspected fetal structural abnormalities, maternal health conditions which may affect the fetus, and family history of a congenital abnormality or genetic disorder.

Comprehensive Prenatal Services

Children’s Prenatal Diagnosis and Treatment Program’s extensive services are complemented by the hospital’s broad range of programs and expertise. The clinic is located in the Springbrook Professional Center, one block from Seattle Children’s main campus.

All of our services are available in our Seattle location. In addition, we offer select services at other sites throughout the Pacific Northwest.

Our services include:

- Fetal diagnosis: fetal echocardiography, level II obstetric ultrasound, and fetal MRI
- Early fetal echocardiogram beginning at 14 weeks gestation
- Genetic counseling
- On-site maternal-fetal medicine consultation with University of Washington physicians
- Coordination of pregnancy, delivery and newborn care
- Genetic testing and amniocentesis
- Emotional and decision-making support for families
- Regional education for healthcare providers
