It’s Time to Start Lantus Insulin

If Lantus is given at breakfast:
• Give the dose as instructed between 6 and 8 a.m.

If Lantus is given at bedtime:
• Give NPH/Humalog at breakfast. This will be your last dose of NPH.
• Give Humalog/NovoLog ONLY at dinner, using carb and correction ratios.
• Give Lantus at bedtime.
• Always take your rapid-acting insulin to cover all meals and snacks over ___gm of carbohydrates. Use your insulin-to-carb ratio.
• Take your rapid-acting insulin to cover high blood sugars at mealtimes, unless it has been less than three hours since an injection was given. Use your correction ratio.

Making dose adjustments
• Report blood sugar numbers on Mondays, Wednesdays or Fridays before 11 a.m. for one to two weeks after starting Lantus for help with dose adjustments:
  • By telephone on the Blood Sugar Line at (206) 987-5452
  • By fax to (206) 987-2720
  • By e-mail to endonurse@seattlechildrens.org
• Lantus can have a peak, and may cause middle-of-the-night lows. Check blood sugar five hours after the dose is given, until the Lantus dose is stable.
• After the dose of Lantus is stable, you will start doing after-meal checks two to three hours after your child has eaten to see how the insulin/carbohydrate ratio is working.
