

Hearing Screening: How to Prepare your Baby for BAER and EOAE Tests

Your baby is scheduled for a hearing screening test. The two tests used to screen your baby's hearing are called the Brainstem Auditory Evoked Response (BAER) and the Evoked Otoacoustic Emission (EOAE). We will be able to tell you during this visit if your baby passes the test or if more testing is needed. If more tests are needed, another appointment will be scheduled for more extensive testing.

Your baby's appointment is on:

How do I prepare my baby for the tests?

- It may be helpful for your child to see their primary care provider for an ear check before the test.
- Dress your baby in comfortable clothes so they may sleep better for the test.
- Try not to let them sleep on the way to the Audiology clinic, so that they are sleepy at the time of the test.

What happens the day of the test?

Please allow 90 minutes for this appointment.

- Your baby needs to be asleep for these tests.
- You will be able to stay in the room with your baby and the audiologist during the test.
- You can feed your baby before the test if needed.

To cancel or change an appointment:

If your baby is sick or the doctor has found their ears are not clear, please call us to reschedule. If you have any questions or concerns, please call the Audiology family services coordinator at 206-987-5173.
