Why Ask: Importance of Swimming

• Swimming addresses injury and obesity prevention.
• Most drownings occur while swimming and playing near water.

What to Ask: Screening for Swimming Ability

• What type of physical activity does <name> do? Has <name> tried swimming?
• Can he/she swim the length of a swimming pool?
• Can s/he swim or float for 10 minutes without touching the bottom or side of a pool?
• Is there a pool at your house or apartment?
• Do you ever visit lakes, rivers, beaches or pools?
• What makes it hard for <name or your family> to learn to swim?
When to Ask: Well-Child Visits
• Screen and refer to swimming at 3 or 4 year well child visit; screen earlier if child has access to pool or open water.
• Follow-up at 5 and 6 year well child visit
• Identify barriers and assist with referral to swimming lessons.
• Follow-up on swim lesson participation during subsequent visits.

What to Watch For: Barriers to Swimming
Factors that influence people’s decisions to learn to swim:
• Cultural beliefs about swimming
• Concerns about water sanitation
• Ability to pay for lessons and pool fees
• Parental ability to swim
• Fear of water
• Language differences
• Discomfort with / inability to participate in co-ed swimming
How to Encourage Swimming:

Exercise Talking Points
• It’s important for kids to be active; swimming is one option.
• Swimming is a lifetime skill and great way to be active.
• This is a really good time in <name> life to learn to swim.
• Swimming may be a fun family activity. There are swimming lessons for families.
• Swimming pools usually have reduced fees to help you pay for swim lessons.

Water Safety Talking Points
• Most drownings are preventable. Learning to swim can help you/your child.
• Proven water safety strategies include learning to swim, barriers around pools and spas, life jackets that fit, quality adult supervision, and lifeguards.
