First Approach Skills Training for Anxiety (FAST-A)
Workbook for Teens

FAST-A is a brief program for youth (ages 7 to 17) with anxiety and their caregivers. It is meant to be your first step to overcoming problems with anxiety.

For some families, more support (such as a full course of cognitive-behavioral therapy, or certain medications) can also be helpful.

Nat Jungbluth, PhD
Kendra Read, PhD
Jennifer B. Blossom, PhD

This workbook was made possible by funding from the WA State Healthcare Authority, as well as feedback and contributions from many generous colleagues. Special thanks to the dedicated primary care-based stakeholders across WA State who have piloted and contributed to the development of this program.
How to Use This Workbook

This workbook is intended for youths (ages 12 to 17) and their caregivers.

Below is the way most families work through the workbook (together with a healthcare provider, or on their own). If you want to move slower or faster that is totally fine.

Meeting 1
   Go through pages 3-18 together. Use page 18 to record what happens that week.

Meeting 2
   Go through pages 18-29. Use page 28 to record what happens that week.

Meeting 3
   Go through pages 30-32. Use page 32 to record practice over the next week.

Meeting 4
   Use pages 33-38. Use page 36 to record practice over the next week.

After Meeting 4
   Continue to practice the skills independently, or with occasional check-ins with your healthcare provider. Use pages 39-40.
Tracking Your Progress

As you go through this program, it helps to check in every couple of weeks to measure progress. Below is a chart you can use to see what happens to your anxiety over time.

We recommend using the PROMIS questionnaire (here is the child/teen version, and here is the parent/caregiver version).

After you fill it out, write in the date below put a dot right above the date to show the score you got. You can label P for parent score and C or T for child or teen score if you want to track both.
FAST-A Meeting 1

Check out the information below to learn about anxiety problems and how to overcome them!

**What is Anxiety?**

Anxiety is a word for the uncomfortable feeling we all get when we think something bad might happen. It is a normal, natural feeling that everyone has.

Anxiety is often helpful, but sometimes it gets too strong and starts to interfere in our lives.

People use different words to describe anxiety, like *frightened, stressed, scared,* or *worried.* What words do you use?

______________________

______________________

______________________

**Did you know?**

About **one in every three teens** has a big anxiety problem at some point...and **one in three adults** do too!

So, out of these 12 teens, about FOUR will have problems with anxiety at some point that keep them from doing things that matter to them.

Many famous people have struggled with anxiety! You probably even know a few, like Selena Gomez, Adele, Bill Heder, or Lady Gaga.
Example: Aliyah Thinks Anxiety Sucks

Meet Aliyah. She sometimes gets really anxious.

Aliyah’s anxiety can feel like a fire alarm going off. It is intense and makes her want to run away from whatever is stressing her out.

Shaky legs

Headache

Stomach feels like she might throw up

And Aliyah gets 3 kinds of anxious thoughts:

1. Something bad is going to happen!
2. It would be TERRIBLE.
3. I couldn’t handle it!

And Aliyah’s anxiety often shows up when it’s really...not fun...

The school bathroom seems gross and freaks Aliyah out

But she REALLY has to go...

And there are two more hours left of school...

If anxiety is such a pain, why do we even have it? Learn what it’s good for on the next pages.
What is the **Stress Boost** response?

When we feel **anxious**, **excited** or **in danger** our body gets a **BOOST**.

**HEAD** - Our brain turns on the stress boost system when it notices danger or challenges. Sometimes people get headaches when anxious.

**EYES** - Our eyes may open wider to let in more light, so we can better spot danger.

**BREATHING** - Our lungs may breathe faster to get extra oxygen to our brain and muscles. We might feel a little dizzy from extra oxygen.

**MUSCLES** - Extra blood and energy flows to our big muscles to help us fight or escape danger. Our muscles can feel tense and a bit shaky from the boost of energy and blood sugar.

**HEART** - Our heart may beat faster, to get extra blood, oxygen and energy to our brain and big muscles so they are stronger and faster.

**STOMACH** - Blood and energy move away from our digestive system, because survival and performance **NOW** are more important than digesting food for energy later. This can feel like stomachaches, butterflies, or nausea. Sometimes people even throw up or have diarrhea.

**SKIN** - Blood often moves away from the surface of our body, and our hands and feet, which is good if we get injured. It can make our skin feel cold or tingly, and we might look pale.

**SWEAT** - Our skin often gets sweaty, to help our high performance body cool off.

These changes are not dangerous and are often helpful!

Your job is not to get **rid** of anxious feelings, but to learn to do the things you need and want to do anyway. Doing this will help re-train your stress boost to only go off when you really need it.

**FUN FACT:** Scientists call some of these changes the “fight, flight, freeze” response because they help animals fight, flee or freeze to get out of danger.
The stress boost response helped our ancestors survive

And it can make us faster

...even though it can often be uncomfortable

and safer

The stress boost can help us as long as we don’t miss out on life by hiding from it.
Why do some people seem to get more anxious?

Sometimes having a strong stress boost system is like being a bit taller or having brown eyes. It’s just a part of who we are. We can also get more stress boost and danger alert reactions after scary things happen to us.

The cool thing is that having strong stress boost and danger alert systems can help us do extra well at things!

Remember Aliyah? Her stress boost and danger alert system is EXTRA strong. For her it sometimes works like having a super power...

Aliyah sees problems 10 miles away!

Aliyah prepares extra for things that are important to her!

Aliyah gets her performance **boosted** in situations that matter!
But other times Aliyah’s danger alert system is too sensitive. . . .

Aliyah’s family moved and she had to start a new school. She wants to make friends but she is too anxious to even say hello.

When we stay away from normal situations that FEEL scary but are actually pretty safe...well, we usually feel a lot SAFER! We feel RELIEVED!

Teens Aliyah’s age in front of her apartment
But over time, **avoiding normal situations** only makes us more scared of them. The situations we avoid begin to feel more and more dangerous!

The good news is there is a way **we can CHANGE how scary things feel!**

We can learn to **turn down the fear alarm** by slowly trying out the safe things we are scared of.
What is “Exposure” or “Brave Practice”? 

**Exposure** is a fancy word for facing our fears to turn down our anxiety. Some people call this “brave practice.”

To make things feel less dangerous, we just need **new experiences** to teach our brain and body we aren’t actually in great danger.

When we face our fears we learn:

* the bad thing we expect doesn’t usually happen!
* the bad thing isn’t as bad as we thought

OR...

* we handle it better than we thought we would.

That’s it.
That’s brave practice.

Aliyah’s uncle tells her nobody gets to have friendship without paying the price of being nervous, embarrassed, awkward and rejected some of the time.

He says these things get easier with practice. And if things go okay the anxiety gets less and less with practice too.

Aliyah decides to try being more social, even if it is hard and she makes some mistakes...
How it works

The more times we face our fear and it turns out ok, the more our brain and body will settle down. We realize we can handle things. The fear alarm gets quieter.

Watch what happens to Aliyah’s fear alarm when she practices looking right at people, smiling, and saying “Hi” every day for a week.

Monday

Tuesday

Wednesday

Thursday

Friday
But what if the danger is real?

Sometimes the thing we fear is something that could actually happen, or we need some **new SKILLS** or a **PLAN** to have things turn out OK.

Check out a few of these **common fears** and some ways that **skills and plans** can help people feel more brave.

</tbody>
</table>
Once we have a plan, or some new skills, we feel more brave. We can face our fears and our brain will learn:

* the bad thing isn’t so likely
  or
* the bad thing isn’t quite so bad
  or
* we can handle tough things like this

So, for each of your fears, we will ask:

- Is this fear something that might really happen?
- Would some new skills or a plan help you face your fear, if you have to?

For any fear you want to conquer, use the guide on the next page to decide what to do...
Answer the questions and follow the paths for these two example fears:
1. I’m terrified a shark will somehow be in the lake and eat me.
2. I’m worried I will bomb my speech and people will laugh at me.

**Guide for Overcoming Fears**

Start here

Is my fear realistic?  
Is it likely to happen in my life?

- No
  - Avoid it!*  
- Yes
  - Is this a situation I should know how to deal with?

- No
  - DO BRAVE PRACTICE!  
    - Face feared situations to learn:
      - The thing I fear isn’t actually so likely.
      - The thing I fear isn’t as bad as I thought.  
      - I can handle it better than I thought.

- Yes
  - Consider whether any of these would help the situation go well:
    - Making a plan for what to do if the feared thing happens
    - Learning a skill to help me in the situation (like what to say)
    - Changing the situation to make the feared thing less likely to happen

*Just don’t go overboard trying to avoid things. That can make you more scared. (See page 29 for more information on this.)
Brave practice, or facing fears, changes our brain and body’s threat alarm. All you have to do is have experiences that **don’t match what you expect**.

The more you face your fear and things go ok, the more your brain and body will settle down.

Can you think of times when **real life didn’t match your fears**?
When things you were scared of turned out better than you expected?
What happened to your anxiety?
FAST-A Meeting 1 Summary:

- Anxiety is a normal feeling.
- Problems with anxiety are very common (about 1 in 3 people).
- Anxiety can help us do our best.
- Avoiding things, when they aren’t actually dangerous, can lead to problems, including more anxiety and distress.
- You can change your body’s fear reactions by facing fears (brave practice).
- You can face fears in small steps at first to make it easier.
- Sometimes when facing fears it is helpful to learn new skills or make a plan. Other times you can just go right ahead and face your fear.

The next 2 pages are for you to complete at home this week.
In the next FAST-A meeting you will learn more about how brave practice works.
At-Home Practice – Week 1

Where is anxiety a problem for you?

Like ice cream, there are many different flavors of anxiety. Some flavors of anxiety will sound like what you struggle with, some will not. Many of these things would make most people anxious or worried. Check off the items that usually make you feel really upset or have started to get in the way of your life. **Put a star next to the things that would be extra important for you to work on. Use this information to set goals with your provider.**

**Being away from family**
- being apart from your parents or other caregivers, during the day or at night
- staying at school or in class

**Social stuff**
- worry that people might think something bad about you or laugh at you, or that you will be embarrassed
- speaking to new people
- answering questions in class
- eating or using a bathroom in public
- standing up for yourself

**Worrying**
- worrying that something bad might happen to you or the people that you love (health and safety)
- doing well enough in school or other activities (e.g., dance, music, sports)
- your future
- things going on in the world or in your community (e.g., politics, crime)
- natural disasters (e.g., earthquakes, tornadoes)
- family stress (e.g., divorce, finances)
- worry about little things that have happened in the past

**Specific fears**
- fear of specific animals (e.g., dogs, spiders, insects), heights, storms, the dark, vomiting, needles/shots, choking or something else very specific

**Feelings in your body**
- feeling anxious in your body (e.g., difficulty breathing, heart racing, feeling dizzy) out of the blue
- wanting to avoid places where you’ve felt anxious in your body before

**Other stuff**
- not making mistakes or being perfect
- thoughts about being contaminated by germs, dirt, or chemicals
- thoughts that are scary, violent, or sexual that make you feel really afraid
- worries that you might do something that you do not want to do
- things that you have to do repeatedly (washing, checking things, asking questions) or have to do in a certain order or routine to avoid feeling anxious
At-Home Practice – Week 1

What are one or two goal areas you want to work on during this program? Think of times or places that anxiety currently gets in the way for you. Use the checklist above to get ideas.

<table>
<thead>
<tr>
<th>Goal Area</th>
<th>How will life be different when I conquer this fear/worry?</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td></td>
</tr>
</tbody>
</table>

To help track your progress, please rate how much you think anxiety problems are messing up your life right now, on a scale from 0 (not at all) to 10 (extremely):

Teen rating: _____  Parent/caregiver rating (about teen’s life): _____

Record how you notice anxiety showing up in your life this week:

<table>
<thead>
<tr>
<th>Event or situation</th>
<th>What I worried might happen</th>
<th>How Anxious I felt (0-10)</th>
<th>What happened?</th>
</tr>
</thead>

</tr>
</tbody>
</table>

Caregivers, please also review the FAST-A Caregiver Handout from your provider.
FAST-A Meeting 2

1. Review your At-Home Practice sheets. Decide on the first Goal Area you will work on together.

2. Read the next section to learn the 4 tricks to make brave practice work best.

3. Use the “My Goal/Retrain Your Brain” worksheet to make a plan for reaching your goal.

4. Check out the Brave Practice Examples for Common Fears sheet to get ideas you can use.
Four tricks to make brave practice work best

1. **Start easy.**
   You don’t have to face the really scary stuff right away. You can start with easier steps and move on to harder stuff.

   1. **Say “hi”**
   2. **Give a compliment**
   3. **Invite someone over**

2. **Choose the right practice.**
   Pick challenges that will help you with your goals and test out your specific fears. This sometimes means doing unusual things, like making mistakes on purpose, to see if what you fear really happens.

   Aliyah worries people will tease her, so she spends way too much time fixing her hair and picking out clothes. She also avoids crowded places where people might notice her.

   Check out some of her brave practices:

   - Messed up hair at a public library
   - Strange clothes at coffee shop
   - Water spill on her shirt at school

   During each brave practice, Aliyah pays attention to whether her fears are really true.

   *(Do people notice? Do people tease her? Can she handle the discomfort? Can she cope with people’s comments?)*

   The brave practices are hard at first, but only one person comments on the water spill and it’s not a big deal.
3. **Ride the anxiety waves.**

When we face our fears, our anxiety usually goes up and down, like waves in the ocean. That’s normal! In fact, having the anxiety go up and down when we face fears helps us learn.

![Image of a person riding waves](image)

Brave practice is also a lot like weightlifting or working out—when it feels hard, that is a sign you are getting a REALLY GOOD workout, and you are teaching your brain a lot.

4. **Stay until you learn.**

When we face our fears, it is important to **stay in the situation** long enough for our brain and body to **learn something new**.

Depending on the fear, this might be 5, 10 or even 30 minutes. If we get freaked out and run away, this doesn’t help and can make our fears even bigger.

So, try to stay in the situation until you can tell your brain is learning:

- *Maybe my fear isn’t so likely*
- *Maybe this isn’t so bad*
- *Maybe I can handle things like this.*

![Image of a brain feeling a little bit better](image)

Usually you’ll notice your stress level start to go down as your brain and body take in the new experience, but don’t worry if it doesn’t.

---

The next page is a sheet where you can get creative and think of lots of ways to face your fear. Try to think of some easy, medium and hard steps. Don’t worry too much about doing the sheet perfectly. It is just a way to get you started coming up with some ideas.
My Goal: ____________________
(Hint: Pick something you’d like to be able to do if you can overcome your fear)

Below, write in some steps you could take to help your brain learn it doesn’t need to feel so scared about doing your goal. Fill in 10-15 ways you can face your fear including some easy, medium and hard ones. (Check out the Brave Practice Examples Sheets for ideas!)

Harder Steps

PRO TRAINING TIP:
Unlike lifting weights, for Brave Practice you can skip right to the harder workouts for faster results!

Medium Steps

Easier Steps

Train Your Brain...with Brave Practice Workouts!
My Goal: More able to talk to people at my new school
(Hint: Pick something you’d like to be able to do if you can overcome your fear)

Below, write in some steps you could take to help your brain learn it doesn’t need to feel so scared
about doing your goal. Fill in 10-15 ways you can face your fear including some easy, medium and hard
ones. (Check out the Brave Practice Examples Sheets for ideas!)

Harder Steps

- Ask classmate about something they have (a phone, a shirt with a band or sports team name)
- Ask classmate a question about a homework assignment
- Sit with new people at a lunch table, join the conversation
- Give someone a compliment
- Ask someone at the grocery store if they have apples, while standing next to the apples

Medium Steps

- Take a walk around the cafeteria and nod at other students
- When I walk into class, nod at other students
- Test myself: See how many classmates I can say “hi” to in a day!
- Take a walk around my neighborhood and say “hi” to people I see
- Start a conversation with a young coffee shop or grocery cashier
- Ask someone at the grocery store if they have apples

Easier Steps

- Walk around neighborhood and say “hi” and smile at people
- Walk around neighborhood and nod to people I see
- Video call with a cousin my age I don’t know well
- Call and place a food takeout order
- Conversation with an adult relative I don’t usually talk to. Keep it going 10 min even if it gets awkward.

Train Your Brain...with Brave Practice Workouts!

# Brave Practice Examples for Common Fears

Many of the following ideas come from www.bravepracticeforkids.com. Visit www.bravepracticeforkids.com for more up to date resources on helping kids learn to manage their anxiety.

## Social Stuff

<table>
<thead>
<tr>
<th>Ideas for In a Clinic</th>
<th>Ideas for Outside a Clinic</th>
<th>Helpful Tips</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Give a 1-minute presentation on random topics (earthworms, your dog, pizza, the flu).</td>
<td>• Give a 1-minute presentation to your parents’ friends</td>
<td>• For everyone, the price of having relationships is occasional awkwardness, rejection, mistakes, and embarrassment. One goal of brave practice is learning you can handle those things. They get easier with practice!</td>
</tr>
<tr>
<td>• Call a restaurant and ask what is on the menu.</td>
<td>• Go to a public place (the mall, grocery store) &amp; tell people you are doing a survey. Ask their favorite ice cream flavor</td>
<td>• Sometimes it helps to learn new skills (like making small talk, joining group conversations, handling teasing).</td>
</tr>
<tr>
<td>• Text a friend about something you think they will like.</td>
<td>• Introduce yourself to a new person in your building or neighborhood</td>
<td>• But often the best practice involves just being yourself, focusing on others, and staying in the present moment when you are interacting.</td>
</tr>
<tr>
<td>• Wear a silly hat and walk around the clinic building.</td>
<td>• Go to a public place and sing happy birthday as loudly as you can.</td>
<td></td>
</tr>
<tr>
<td>• Ask several people what time it is while wearing a watch.</td>
<td>• Answer a question in class when you’re not sure you know the answer</td>
<td></td>
</tr>
<tr>
<td>• Post something boring or silly on social media. Don’t check if it is liked.</td>
<td>• Delay checking social media</td>
<td></td>
</tr>
<tr>
<td>• Give a 1-minute presentation to your parents’ friends</td>
<td>• For fears that are real, youths can learn skills or make a plan for if they happen.</td>
<td></td>
</tr>
<tr>
<td>• Go to a public place (the mall, grocery store) &amp; tell people you are doing a survey. Ask their favorite ice cream flavor</td>
<td>• BUT, too much planning is often a SAFETY BEHAVIOR. Instead youths can practice living with uncertainty, doing things without a plan.</td>
<td></td>
</tr>
<tr>
<td>• Introduce yourself to a new person in your building or neighborhood</td>
<td>• Answer a question wrong on purpose (on homework, on a quiz).</td>
<td>• Caregivers can work on giving less reassurance about worries.</td>
</tr>
<tr>
<td>• Go to a public place and sing happy birthday as loudly as you can.</td>
<td>• Practice not asking a parent if something bad is going to happen.</td>
<td>• Teens can practice the skill of sitting with the uncomfortable feelings of not knowing what will happen.</td>
</tr>
</tbody>
</table>

## Worrying

<table>
<thead>
<tr>
<th>Ideas for In a Clinic</th>
<th>Ideas for Outside a Clinic</th>
<th>Helpful Tips</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Watch a news story about your worry (health, safety, crime, etc.).</td>
<td>• Have caregivers change plans at the last minute, show up early or late.</td>
<td>• For fears that are real, youths can learn skills or make a plan for if they happen.</td>
</tr>
<tr>
<td>• Write a story about the worst-case scenario you are imagining and read it repeatedly.</td>
<td>• Take a walk with no destination and flip a coin to decide which direction to go</td>
<td>• BUT, too much planning is often a SAFETY BEHAVIOR. Instead youths can practice living with uncertainty, doing things without a plan.</td>
</tr>
<tr>
<td>• Break a small rule like being 5 minutes late to class or turning in work a few hours late.</td>
<td>• Answer a question wrong on purpose (on homework, on a quiz).</td>
<td>• Caregivers can work on giving less reassurance about worries.</td>
</tr>
<tr>
<td>• Make mistakes on purpose.</td>
<td>• Practice not asking a parent if something bad is going to happen.</td>
<td>• Teens can practice the skill of sitting with the uncomfortable feelings of not knowing what will happen.</td>
</tr>
</tbody>
</table>
## Being Away from Family

<table>
<thead>
<tr>
<th>Ideas for in a Clinic</th>
<th>Ideas for Outside a Clinic</th>
<th>Helpful Tips</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Send caregivers on a walk or errand and talk about what you fear could happen, without calling or texting to check in.</td>
<td>• Gradually increase space (and time!) apart in the house (different rooms, different floors).</td>
<td>• Teens can learn skills for sad feelings during separation (distraction, getting support of a teacher).</td>
</tr>
<tr>
<td>• Send caregivers on a walk or errand and talk about what you fear could happen, without calling or texting to check in.</td>
<td>• Have a caregiver run an errand while you stay at home.</td>
<td>• Safety behaviors like texting or calling to check on caregivers can be decreased, with rewards for sticking to the plan.</td>
</tr>
<tr>
<td>• Spend time alone in a room, gradually increasing time.</td>
<td>• Have playdates, sleep overs.</td>
<td>• Caregivers can work on reducing reassurance about separation.</td>
</tr>
<tr>
<td>• Have caregiver leave session and return later than expected.</td>
<td>• Practice sleeping independently</td>
<td>• It can be helpful to learn other skills, like what to do if you get lost or need help and your caregiver isn’t with you.</td>
</tr>
<tr>
<td>• Have caregiver leave session and return later than expected.</td>
<td>• Practice not checking in on your parents</td>
<td></td>
</tr>
</tbody>
</table>

### Specific Fears
(things like needles, vomit, blood, heights, spiders, other animals)

<table>
<thead>
<tr>
<th>Ideas for in a Clinic</th>
<th>Ideas for Outside a Clinic</th>
<th>Helpful Tips</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Look at a picture or watch a video of the feared object or situation (animal, needle, vomit, etc.)</td>
<td>• Take a trip to see the feared object or situation (go to a pet store, go to the doctor with a sibling, etc.).</td>
<td>• Caregivers can work on reducing avoidance or accommodation about these fears (like asking family friends to put their dogs away when you come over).</td>
</tr>
<tr>
<td>• Read or tell short stories about people encountering the feared object or situation.</td>
<td>• Go on a scavenger hunt to find the feared object/animal.</td>
<td>• Some people with fears about blood or needles will faint in the presence of blood or needles, or when talking about them. Practice Applied Tension to prevent fainting:</td>
</tr>
<tr>
<td>• Bring the feared thing into the room and gradually get closer to it.</td>
<td>• Watch educational videos about the feared topic (flu shots, blood draws, high places, animals).</td>
<td><a href="https://www.anxietycanada.com/sites/default/files/blood_and_needles.pdf">https://www.anxietycanada.com/sites/default/files/blood_and_needles.pdf</a></td>
</tr>
<tr>
<td>• Bring the feared thing into the room and gradually get closer to it.</td>
<td>• Look for and cut out any unnecessary safety behaviors.</td>
<td></td>
</tr>
<tr>
<td>• Send caregivers on a walk or errand and talk about what you fear could happen, without calling or texting to check in.</td>
<td>• Gradually increase space (and time!) apart in the house (different rooms, different floors).</td>
<td></td>
</tr>
<tr>
<td>• Send caregivers on a walk or errand and talk about what you fear could happen, without calling or texting to check in.</td>
<td>• Have a caregiver run an errand while you stay at home.</td>
<td></td>
</tr>
<tr>
<td>• Spend time alone in a room, gradually increasing time.</td>
<td>• Have playdates, sleep overs.</td>
<td></td>
</tr>
<tr>
<td>• Have caregiver leave session and return later than expected.</td>
<td>• Practice sleeping independently</td>
<td></td>
</tr>
<tr>
<td>• Have caregiver leave session and return later than expected.</td>
<td>• Practice not checking in on your parents</td>
<td></td>
</tr>
</tbody>
</table>

• Teens can learn skills for sad feelings during separation (distraction, getting support of a teacher).  
• Safety behaviors like texting or calling to check on caregivers can be decreased, with rewards for sticking to the plan. 
• Caregivers can work on reducing reassurance about separation. 
• It can be helpful to learn other skills, like what to do if you get lost or need help and your caregiver isn’t with you.
### Feelings in Your Body
(fear of having panic attacks or other body feelings)

<table>
<thead>
<tr>
<th>Ideas for in a Clinic</th>
<th>Ideas for Outside a Clinic</th>
<th>Helpful Tips</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Do things that bring on your panic or body symptoms, to help teach your brain they aren’t dangerous, like:</td>
<td>• Do exercises that bring on your symptoms (see at left) in different places, in different combinations, with or without your caregiver or friends.</td>
<td>• For many people with panic attacks or body symptoms that frighten them it is helpful to do bring on the feelings on purpose so you can test out your fears about them.</td>
</tr>
<tr>
<td>⇒ Spin fast in an office chair (1 min);</td>
<td>• Go to places or do activities that you fear could bring on panic or body symptoms.</td>
<td>• It is also key to start going places and doing activities you’ve been avoiding for fear of getting panic or body symptoms. With practice you’ll learn you can handle it.</td>
</tr>
<tr>
<td>⇒ breathe forcefully, fast and deep (1 min);</td>
<td></td>
<td>• Decrease safety behaviors, like drinking water, keeping certain items nearby, staying near exits, or keeping phone or parent close by.</td>
</tr>
<tr>
<td>⇒ hold your nose and breathe through a straw (2 min);</td>
<td></td>
<td></td>
</tr>
<tr>
<td>⇒ hold your breath (30 sec);</td>
<td></td>
<td></td>
</tr>
<tr>
<td>⇒ high knees running in place (2 min);</td>
<td></td>
<td></td>
</tr>
<tr>

### Other Stuff
(including obsessive compulsive disorder)

<table>
<thead>
<tr>
<th>Ideas for in a Clinic</th>
<th>Ideas for Outside a Clinic</th>
<th>Helpful Tips</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Go on a germs scavenger hunt (touch floors, door knobs, parts of a toilet) without washing hands.</td>
<td>• Complete a ritual (compulsion) “just wrong” (do the opposite of what OCD says!)</td>
<td>• Obsessions are uncomfortable thoughts, feelings or images; Compulsions are the things you do over and over to get rid of or manage your obsessions.</td>
</tr>
<tr>
<td>• Break a rule without “confessing”.</td>
<td>• Avoid “checking” things (like door locks)</td>
<td>• The solution is to do things that bring up obsessions, but NOT do the compulsions you normally do. This teaches your brain that obsessions can be tolerated, and compulsions aren’t necessary.</td>
</tr>
<tr>
<td>• Write your name with your non-dominant hand. No erasing or re-writing.</td>
<td>• Make a mess of your belongings</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Write a story about the thing you are scared you might do and reread it many times.</td>
<td></td>
</tr>
</tbody>
</table>
If you haven’t finished the My Goal/Re-train Your Brain sheet, make sure to do that for your next meeting.

Also, let’s identify some small rewards you can earn for doing the hard work of completing daily brave practices. Good examples are small items, privileges, treats, or fun activities. Write ideas in this box:

Sometimes families decide on bigger rewards that can be earned over time. Parents/caregivers can assign point values to each reward and teens can earn points by doing their brave practices. Harder brave practices can be worth more points!

<table>
<thead>
<tr>
<th>Reward idea</th>
<th>Points to earn it</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Just remember: The true reward is overcoming your anxiety! These rewards are just a bonus to recognize and encourage your hard work along the way.

Track how you notice anxiety in your life this week:

<table>
<thead>
<tr>
<th>Event or situation</th>
<th>What I worried might happen</th>
<th>How anxious? (0-10)</th>
<th>What happened? Did I take any brave steps (big or small)?</th>
</tr>
</thead>
<tbody>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
When people are really scared of a situation, sometimes they do things to feel more safe. Some things we do to feel safe are just *GOOD IDEAS*. Like wearing a seat belt in a car.

But some things we do to feel more safe are not really needed. We call these *SAFETY BEHAVIORS*. Like always wearing a helmet and safety goggles whenever you ride in a car...that’s too much.

Extra safety behaviors that we don’t really need to do are a form of *avoidance* and can keep our brain feeling anxious about situations that aren’t really that bad.

In the list below, circle the behaviors you think are *GOOD IDEAS* (just right) and cross out the behaviors you think are *SAFETY BEHAVIORS* (too much).

- Wearing a helmet when biking or skateboarding.
- Wearing a helmet while jogging.
- Staying out of the kitchen because knives are dangerous.
- Spending three times as long as your classmates on homework to be sure it’s perfect.
- Washing your hands before eating a meal to keep from getting sick.
- Making detailed plans for exactly what you will say when talking to a friend.
- Keeping your phone with you at all times in case of emergencies.
- Checking that doors are locked three times before bed.
- Only posting pictures on social media that are perfect, or edited.
- Avoiding certain foods or activities in case they could somehow make you throw up.
- Repeatedly checking your social media posts to make sure enough people liked it.
- Checking again and again for spiders around you to make sure none will “get” you.
- Checking with your friends about what you do, what you wear, who you hang out with, to make sure they approve.
- Asking your caregivers the same question repeatedly.

List any things you do that might be safety behaviors:

____________________________________
____________________________________
____________________________________

During the FAST-A program, as you face your fears, keep an eye out for “safety behaviors” you might be doing that actually keep you from learning that situations are safe or tolerable. Stopping safety behaviors can feel scary at first, but you will feel braver if you do.

If you aren’t sure whether something is a safety behavior or just a good idea, check with your caregiver or health care provider to see what they think.
FAST-A Meeting 3

1. Review your Week 2 At-Home Practice Sheets. Have you identified some rewards you can use?

2. Next, figure out a brave practice that you can do together in the meeting today. Feel free to start on the easier side to begin with, but remember that harder exposures help you reach your goal faster!

3. Remember to use the decision tree on page 14 if you think you might need to learn new skills, make a plan, or change the situation in some way to help make your brave practice a success.

4. Use the Doing Brave Practice worksheet to help with your first brave practice.

5. Lastly, use the At-Home Brave Practice Tracking Sheet to plan and then track your brave practices and rewards for the coming week.
Doing Brave Practice Worksheet

Brave practice means facing fears to overcome them. Being afraid, anxious or worried when it is not dangerous can get in the way. When you face fears on purpose, you learn 1) your worst fears are not likely to happen, 2) they aren’t as bad as you expected, or 3) you can handle it. Avoiding fears makes them grow, but facing fears shrinks them.

Before you start:

List exactly what you will do to face your fear. (Be specific about your goals—what will you do and for how long.)

What are you afraid will happen if you do this? (Be specific.)

How high do you think your anxiety will get (0-10)?

What is a reward you can have for facing your fear successfully?

After you finish:

Were you able to face your fears?

How did your experience compare to what you were afraid would happen? What surprised you?

What did you learn? What evidence do you have that you can handle the situation?

How high did your anxiety get? Rate on a scale from 0 (totally calm, no anxiety) to 10 (the most anxious you’ve ever been).

At the end of the week, please rate how much you think anxiety problems are messing up your life right now, on a scale from 0 (not at all) to 10 (extremely): Youth rating: _____  Parent/caregiver rating (about youth’s life): _____
FAST-A Meeting 4+

1. Review your Home Brave Practice Tracking Sheet.

2. Use the Weekly Parent/Caregiver Agenda for Continuing Brave Practice and Doing Brave Practice and At-Home Brave Practice Tracking Sheet to guide today’s meeting and next steps.

3. If there is time, check out the Relapse Prevention Handout to learn how to keep anxiety in check once you’ve overcome it.

FAST-A - After Today’s Meeting

1. If you’ve been doing FAST-A meetings with a healthcare provider, talk with them about whether you should continue to check in, in person or by telephone.

2. Schedule regular meetings on your own, just you and parent/caregiver, to plan and carry out brave practices that can help you feel braver in your life.

3. Work your way up toward your goals. Do brave practice in different ways until your brain catches on, until you can do all the things you want to in your life without anxiety stopping you.

4. Keep practicing together! Anxiety has a way of showing up again in the future... so always be ready to tackle your fears with more brave practice!
Weekly Parent/Caregiver Agenda for Continuing Brave Practice

1) **Review the past week’s brave practice.** Praise successes and ask questions to solidify what was learned:
   - Example questions:
     a. *What did you learn from your practice?*
     b. *Did the things you feared actually happen?*
     c. *Was there any evidence your fears were not accurate?*
     d. *Was there any evidence you can handle situations like this?*

2) **Rewards.** Make sure you are up to date with giving out rewards/points that have been earned.

3) **Make sure we are on the right track.** Are we working on the right things? Are there other important fears or goals we need to address? Are the rewards still motivating?

4) **Identify a brave practice for today.** If it helps, you can use the Doing Brave Practice Worksheet to plan it.

5) **Support the Brave Practice.** Remember to:
   a. Validate (“I know this is hard/scary”).
   b. Show confidence (“You can do this”).
   c. Encourage (“You are doing great” “I am so proud of you”).
   d. Look out for safety behaviors (ways the youth might be avoiding or distracting themselves during brave practice) and encourage them to try giving them up.
   e. If the brave practice allows for it, ask questions DURING the practice to help with learning:
   - Example questions:
     i. *What are you noticing about the situation?*
     ii. *What is your anxiety like, in your body?*
     iii. *What does your anxiety want you to do? What ways are you tempted to avoid?*
     iv. *What are you going to do instead? Why?*
     v. *What are you learning so far?*
     vi. *How does this compare to what you expected?*

6) **Use the Doing Brave Practice Worksheet.** Record what happened and what was learned.

7) **Use the At-Home Brave Practice Tracking Worksheet.** Make a plan for daily practice in the coming week.

8) **Schedule the next caregiver and youth Brave Practice planning meeting.** Meetings should happen at least weekly, or more often for faster progress.

Youth rating: _____  
Parent/caregiver rating (about youth’s life): _____
Relapse Prevention Handout

Relapse prevention means keeping your anxiety problems from coming back. Even if you’re not quite done tackling your anxiety problems, you might have questions about what happens after you succeed. Read on to find out!

How do I know when I have overcome my anxiety problem?
You have overcome your anxiety problem when you stop having really big fear reactions most of the time in normal situations. Of course you will still feel anxious about stressful or important things, and you will still have big anxiety reactions sometimes. The most important sign of success is that you have learned how to do what matters to you, and you live your life the way you want to, even if big or small anxiety shows up.

Will my anxiety come back?
Sometimes people overcome their fears, only to have the fear spring back up later on. Why does this happen and what can you do about it? Check out these illustrations to find out.

As long as Aliyah keeps practicing, she will continue to feel safer about meeting new people.

If Aliyah stops practicing (like for example during a pandemic!) or if she has a bad experience with meeting new people, that old connection can become the stronger one and her fear will come back. But it’s OK! A bit of extra practice with meeting new people should restore the safety connection. Practicing will teach her brain that bad things are unlikely to happen, and if something bad does happen she can handle it.

(continued on next page)
What about other fears?
People with a big fear response about one thing in life are more likely to have big fear responses about other things. You can apply your brave practice skills to any situation where your fear is stopping you from doing things you need or want to do.

Planning ahead
Answer the questions below to make a plan to prevent anxiety problems from coming back later on.

1) Identify future trigger situations
Can you think of any events or situations that could cause your fears to come back? Someone who is really anxious about school might feel more anxious after a holiday break. Someone who has overcome a phobia of dogs might feel more anxious after hearing about someone bitten by a dog. What are changes or situations that could come up that might trigger a return of YOUR fears?

2) Make a plan to be brave
For any trigger situations you can think of, make a plan for how you can handle it. Is there any extra preparation or practice you can think of that will help you feel more confident?

3) Remind yourself
What are some things you can tell yourself if you find that you are getting too scared of normal situations in the future and you feel stuck?
Doing Brave Practice Worksheet

Brave practice means facing fears to overcome them. Being afraid, anxious or worried when it is not dangerous can get in the way. When you face fears on purpose, you learn 1) your worst fears are not likely to happen, 2) they aren’t as bad as you expected, or 3) you can handle it. Avoiding fears makes them grow, but facing fears shrinks them.

**Before you start:**
