

# Are You Interested in a COVID-19 Vaccine Trial for Children?

We are doing a COVID-19 vaccine research study for children. We have evening and Saturday research appointments available.

Research is always voluntary!

## Would the study be a good fit for my family?

This study might be a good fit for your child if they:

- Do not have a history of COVID-19
- Are between the ages of 6 months and 11 years old
- Are willing to do study activities including:
  - Shots
  - Blood draws
  - Nasal swab(s)
  - Visits at Seattle Children's Hospital over two years
- Are healthy or medically stable
- Are not pregnant
- Have a healthy immune system
- Have a parent who can communicate with study staff by phone

## Children who join the study would:

- Receive two doses of a COVID-19 vaccine during the study
- Receive two to four shots during the study, as some children may get placebo first and vaccine later
- Have blood drawn to measure antibodies ("germ fighters")
- Record reactions after the shots and tell the study team
- Receive \$100 for each planned clinic visit
- Receive \$5 for each full week of completed e-diary
